DARKNETS
Joyce Etherton

Darknets can be described as the hidden, anonymous underbelly of the searchable web—stuff that isn't discoverable by the major search engines. It isn't recommended that readers delve into this often nefarious web activity, but it's worth knowing that it's out there.

ComputerEdge® Online publisher Jack Dunning has written a comprehensive article on "software for enabling online anonymity and censorship resistance." **Tor** (previously an acronym for **T**he **O**nion **R**outer) is free and open source software for Windows, Mac, Linux/Unix, and Android. Developed by the U.S. Naval Research Laboratory, Tor network is one of the best known and most used darknets. The development, uses and governments/people/media that use Tor makes an interesting read.

In his 2/21/14 issue of ComputerEdge®, Dunning writes that media companies have set up hidden Tor sites for people to leak sensitive government of company activities and is likely the method Edward Snowden used for leaking NSA's classified documents. The notorious WikiLeaks is a well-known user of Tor.

The question is: "How does someone reach out from inside a despotic regime to like-minded people both in that country and elsewhere in the world without opening up oneself to serious personal danger? Enter Darknets."

Darknets are Internet worlds unknown by most people. They don't show up in the usual Web browsers and Google does not index their hidden sites. They are where worlds can congregate in a secret environment away from prying eyes—whether for promoting dissident movements or illicit activity http://webserver.computoredge.com/online.mvc

- Tor prevents people from learning your location or browsing habits.
- Tor is for web browsers, instant messaging clients, and more.
- Tor is free and open source for Windows, Mac, Linux/Unix, and Android

This is the official link to the Tor project website: https://www.torproject.org/

VOILA: SCREEN RECORDER AND SCREEN CAPTURE TOOL

From: Global Delight Technologies Pvt. Ltd

Open the Mac App Store to buy and download apps

- $29.99
- Category: Productivity
- Updated: Feb 06, 2014
- Version: 3.7
- Size: 16.2 MB

Rated 4+
Compatibility: OS X 10.6.6 or later
Voila 3.7 is here! This new version includes improved social sharing functionality features via Facebook, Twitter, Vimeo, AirDrop and

iMessages, and improved stability and features for OS X Mavericks (10.9).

OSX 10.9 (Mavericks) style one

click - sharing

Voila is an "all-in-one" tool that can snap or record any part of your Mac screen; edit the image and share with everyone! DIY videos, courseware and training materials in a flash. Preset recording time with Auto Timer. Record upto 60 fps high quality video with Voila. Freedom to choose the right frame rate, everytime.

Comment by user: On first use there is no obvious way to stop a recording. No menu to stop recording and no BIG BUTTON to stop. I had to kill the process on my mac to stop it. On second/third use I saw a message to use a shortcut key. It flashed so fast I had to do it few times to pick up on the (3) keys I am supposed to use. Once I had them, they did not work!

To be fair, I did not realize *I needed to include the "Shift" in my shortcut key sequence.* After that, it seemed to deliver on its promise. I am increasing the stars now that I have had more time with it.

VIDEO GUIDE TO MAVERICKS
By Clever Media, Inc.

Open the Mac App Store to buy and download apps.
https://itunes.apple.com/us/app/video-

guide-to-mavericks/id724780151?mt=12&ign-mpt=uo=4

- $9.99
- Category: Education
- Released: Oct 22, 2013
- Version: 1.0
- Size: 558 MB

Rated 4+

Compatibility: OS X 10.7 or later, 64-bit processor

Learn the ins and outs of using OS X Mavericks. This app includes 25 video tutorials, a total of more than 2 hours of video instruction. It begins by showing you the basics of the desktop and then goes into detail about using the Finder, iTunes, Safari, Mail, TextEdit, Preview and other basic apps. Lots of tips, tricks and techniques.

Each tutorial clearly presents a topic and shows you how to use Mavericks. You can move around between the tutorials and inside them using a simple video player. You can watch while trying out techniques for yourself. Presented by the host of the MacMost Now video podcast, the creator of hundreds of online video tutorials and the author of books on the Mac and iPad.
The Video Guide to Mavericks is brought to you by MacMost. MacMost.com contains hundreds of free video tutorials, but the ones in this app are unique to the app and give a deeper beginner's look at Mavericks.

Customer Review: Quick and simple. HELPFUL!

🍎🍎🍎🍎

Note to Mavericks Users:

Looks as though Mavericks 10.9 has changed the behavior for adding application/document shortcuts to the Finder toolbar.

Where before you could simply drag any icon up to the Finder toolbar and hold it there for a second to add it, you now need to first hold down Option +Command and then start dragging the desired icon to the toolbar.

You can still remove the icons the same way as before: holding down Command, dragging the icon away from the toolbar and then releasing.

🍎🍎🍎🍎

Every morning is the dawn of a new error.

DAPi Recycles

Please bring your empty inkjet and toner cartridges to the next meeting

APPLE RECYCLING PROGRAM

http://www.apple.com/recycling/

Get an Apple Gift Card for your old device - Did you know? If you have an old iPhone, you could get an Apple Gift Card for its fair market value.

Recycle your iPod or mobile phone - The Apple Recycling Program offers free and environmentally friendly disposal of your iPod and any manufacturer's mobile phone.

INPAINT FOR MAC
https://itunes.apple.com/us/app/inpaint-5/id504991337?mt=12

Remove elements from your photos with Inpaint restoration software - $19.99

- Remove people or other unwanted elements from your photos
- Remove watermarks and objects
- Repair old photos
- Erase wrinkles and skin blemishes in portraits
-

Compatibility: OS X 10.7 or later, 64-bit processor

REALLY FAST INTERNET SPEEDS FROM GOOGLE USING GOOGLE FIBER

Over the last few years, gigabit Internet has moved from idea to reality, with dozens of communities working hard to build networks with speeds up to 100 times faster than what most of us live with today—from Google Fiber.

Jack Dunning of *ComputerEdge® online* has written a comprehensive summary of the complexities of providing fast internet services—the costs, political and governmental rules and regulations, and profits. To provide such services is an incredibly complicated, expensive and time-consuming process. Only three markets in the U.S. currently have access to this ultra-fast internet provided by Google Fiber: Provo, Kansas City and Austin. One Kansas City suburb delayed the political process too long and Google Fiber stopped negotiations. The *Kansas City Star* reporter wrote:

- **Google's patience with local regulations has limits**
- **Google Fiber is building only in neighborhoods where demand was strong enough to justify the expense**

Jack Dunning, ComputerEdge® online at
http://webserver.computoredge.com/online.mvc?article=toc&issue=3209&zone=CO&src=mailrev

It looks like it will be decades before Google Fiber can have an impact on most of the nation. The impediments to installing infrastructure (both physical and political) make progress slow.
. . . .

What will be needed in the next decade is the one gigabit connection, but the cable companies seem to have little interest in doing the work of laying fiber

optic cable. It's easier to work out deals with Netflix and other Internet streaming services to squeeze more cash out of the current geographically monopolistic system.

Eventually, the dinosaurs die out. The current dinosaur is the cable industry. Enter Google Fiber.

🍎🍎🍎🍎

There's always someone more confused than I

Taken from a recent internet forum:

What am I supposed to do in regard to the recent discovery of a security flaw in OS? I'm using Firefox for banking right now, but I want to go back to Safari.

I'm using OS X 10.6.8. I have no idea if that is Mavericks or Snow Leopard or Fluffy the Cat. Do I download the free Mavericks from the App Store?

MAC FORUMS – YOU DON'T HAVE TO JOIN TO READ

When you have a computer glitch, going online to see if anyone else has the same problem and if someone has solved it can get you out of trouble sometimes. See the following links to some of the MacForums. Note: you don't have to sign up to read them, only if you want to pose a question or answer.
