Denver Apple Pi
Mac SIG

Tuesday
October 19, 2021

Presenter:

Tom King
In a completed project, Tom will show how he used Photoshop and Illustrator and how to download photos from the web.

TABLE OF CONTENTS

MEMBERSHIP NEWS – NEW FORMAT

This May 2021, DAPi instituted a new format for membership dues. **Our $15 annual dues are now due on May 1 for the year for all DAPi members.** We didn't collect dues during the pandemic, so this is an opportune time to begin anew. You can pay your dues to Elissa at the meetings or send *DAPi dues for 2021-2022 to Elissa at 6501 Welch Court, Arvada CO 80004-2333*.

COMING EVENTS:
**Mac SIG: October 19, 2021
Help SIG: October 28, 2021**

Help SIG: Call Elissa to get your name/problem on the list so our DAPi Help people will be prepared. You will need to bring your computer, your own power cord, mouse and keyboard. Elissa will keep a sign-up list for those asking for help at the Help SIG meetings so members can be helped in a prioritized way. Drop-ins are welcome. Contact Elissa at elissamc@comcast.net or at (303) 421-8714. Tom King says if you have questions about Excel for Mac (the spreadsheet software program), call Elissa in advance to get on the list.

Need help with iPad, iPhone? If you would like assistance with navigating and synchronizing your iPad and iPhone, bring them to the Help SIG meeting. Notify Elissa what help you need, and we will try to get the problems resolved.

REMEMBERING STEVE JOBS
10th Anniversary of his Death on October 5, 2011

Steve Jobs was a complicated man whose visions and influence "helped bring about two of the most iconic companies of their kind: Apple and Pixar." Apple Computer Inc. was founded in 1976 (but not in the popularized garage as myth would have it). Apple's IPO occurred in December 1980 with 4.6 million shares priced at $22. (Looking at the Apple stock split history from start to finish, an original position size of 1000 shares would have turned into 224000 as of 08/31/2020.

Steve Jobs gave the commencement address at the Stanford University 2005 graduation and told of the beginnings of Apple including successes and failures. He told of his being fired from the company he founded, and then how he was hired back 5 years later. In the speech, he said,

"Your work is going to fill a large part of your life, and the only way to be truly satisfied is to do what you believe is great work. And the only way to do great work is to love what you do. If you haven't found it yet, keep looking. Don't settle. As with all manners of the heart, you'll know when you find it."

Apple Store Interior

Art Gensler, the designer of Apple Store Interiors, died in 2021 and in his obituary Gensler 's work with Steve Jobs was described. In 2000 Steve Jobs hired architect/designer Art Gensler to design the interior of Apple stores. Gensler and his firm built full-scale models of Apple stores in a warehouse. Weekly for five months, Gensler and Steve Jobs reviewed and demolished designs until Jobs was satisfied. Many architectural firms vied for the opportunity to design Apple stores, but Steve Jobs selected Gensler and fired the others. As a side note, Gensler designed the Shanghai Tower, a 128-story megatall landmark, helical shaped building covered with two layers of glass for insulation that opened in 2016.

Gensler's Shanghai Tower on right.

While Steve will always be remembered for the devices he brought into the world, it was his showmanship that perhaps made the biggest impact. The products were always great, but it's his introductions that will always be remembered: pulling the MacBook Air out of an envelope, the iMac rising out of the stage, removing the iPad nano from his jeans pocket, and of course, the "one more thing" add-ons at the end. What stands out the most is the iPhone keynote at Macworld San Francisco in January 2007, the world had no idea that everything was about to change. But Steve knew. Since his passing, Apple has brought the technique out of retirement very rarely;

the first of these was when Tim Cook revealed the Apple Watch in 2014. But while "one more thing" may be (mostly) gone, to Apple fans it's certainly not forgotten.

iOS 15 RELEASE DATE SEPTEMBER 14, 2021

Find which iPhones are compatible with iOS 15 and instructions on how to install it. https://support.apple.com/guide/iphone/supported-models-iphe3fa5df43/ios

- Instructions for each compatible model are shown.
- Turn on and set up iPhone
- Learn basic gestures
- iPhone camera basics
- What's new in iOS 15

An interesting new feature on iOS 15 is the Native 2FA Code Generator and Autofill. iOS 15 has a built-in generator for 2FA codes (two Factor codes). After you set this up, it will make it a seamless operation logging into your accounts that have 2FA. Two factor means you have two security questions to ask before you can open your program; i.e., your password and, for example, your best friend's name.

Follow the instructions below to manually install the native 2FA on compatible iPhones.

- Using iOS 15 on iPhone or iPad, open **Settings**
- Swipe down and tap **Passwords**

- Create a new login/password or chose an existing one
- At the bottom, tap **Set Up Verification Code**
- Choose **Enter a Setup Key** or **Scan QR Code** to complete the setup.
- To find the QR code to setup 2FA for any given account, look in the settings for that service/website.
- Now you'll see the 30-second regenerating 2FA codes appear for each login item in iOS Settings>Passwords, but they'll be autofilled anytime you need to use them.

Note: if you already have 2FA set up in your accounts, you'll need to turn it off, then turn it back on to set it up with iOS 15's native 2FA and autofill integration.

10 MAC FEATURES THAT WILL SAVE YOU TIME
MacMost.com https://macmost.com/video-list

Gary Rosenzweig of MacMost.com has many helpful video tutorials. One recent one is titled,"10 Mac Features That Will Save You Time," and the first is how to use keyboard shortcuts. Gary's comment is that his hands never need to leave the keyboard (no using a mouse or track pad) to click on something he wants because there are keyboard shortcuts to do it.

If you haven't noticed, there are symbols in the menu bar for many items to the right in the app you're using. The way to remember shortcuts is to use them. Your editor use

learned a new shortcut—to paste the title of this article and retain the format of the *destination* that is in the Table of Contents. I needed to add "option shift" to the shortcut ⌘V. Before, I've used a second method that also works, but this new shortcut is easier.

MacMost tutorials, tips and news every week? Subscribe to the free and ad-free MacMost newsletter. MacMost has Q&A forum as well where readers ask questions and Gary Rosenzweig answers as well as answers from other readers.

Comment from subscriber: "The MacMost weekly newsletters contain the latest Mac and iOS news. The short and to-the-point tutorials can't be beat. MacMost is my first "go to" place for answers to my Mac and iOS questions."

PRIVATE BROWSING ON YOUR iPHONE, iPOD TOUCH OR iPAD?

There is great interest these days about who can see what we do on our devices as we surf the web. Apple tells us we can do "Private Browsing" on our iOS devices that protects our private information and blocks some websites from tracking our search behavior and that Safari won't remember the pages we visit, our search history, or our AutoFill information. However, what it didn't say in this brief explanation is that "websites, your internet service provider (ISP) and advertisers can still see

everything. If you're on your work phone, …Wi-Fi, Private Browsing Mode won't keep you private from the IT department."

So what good is Private Browsing? Here is what it will do very specifically: **If you let someone use your iPhone or other device with Private Browsing turned on, they won't be able to see what you've been doing, even though your ISP, advertisers, etc. can.** So if you want to keep your browsing secret when you lend your device to someone, here's what you do:

New Page Icon

Open Safari
Tap New Page
Tap Private
Tap Done

To undo Private Browsing,

Open Safari
Tap New Page
Tap Private
Tap Done

Kim Komando says to keep others from seeing your surfing history, use ExpressVPN that scrambles and anonymizes your IP address so you can actually get as close to being invisible as possible. ExpressVPN

Works With Any Platform: PC, Mac, Android, iPhone, TV, More.

As a side note, Incognito mode, (same as Private Browsing for Apple) is part of the Chrome browser, so it's a Google product. And a U.S. judge just allowed a $5 billion class action lawsuit against Google to go to trial. Because even when you use Incognito mode, Google collects and sells your data and makes a fortune off it.
